Virtual Desktop Streamer

- [Set a Windows network to private](#)
- [Stable connection with Wireguard VPN](#)

Set a Windows network to private

I had the problem when enabling my VPN, that the streamer considers the network adapter as not private.

Start powershell as administrator, change wg0 with your adaptor name.

```
Set-NetConnectionProfile -InterfaceAlias 'wg0' -NetworkCategory 'Private'
```

Stable connection with Wireguard VPN

Sometimes you might be firewalled or the application might not consider your network as a private connection.
You can work around this, by using your wireguard VPN in the VR headset.

WireGuard for Android Downloads

1. Download the APK into your headset (via browser or sideload)

2. Install the APK

3. Load the configuration file (sideloaded, browser, …)

4. Connect
